

Embossing Rollers

Hanky

Roller Properties

Surface hardness up to 65 HRC

Innovative materials

Innovative sleeve technology

Special coating for greater protection against abrasive wear

Services

Installation services/roller changes

Pre-storage-process in 4 steps ensures:

- Short delivery times because of provisioning
- Optimized delivery performance
- Active supply-chain-management

Advantages

Multiple use of sleeves allows

- Costs savings
- Short lead times

Reduced vibrations

Long lifetimes

Diverse embossing possibilities

Optimized pin quality because of new finishing process

Surface area calculation of embossing designs

Customer Workshops

Close cooperation allows for:

- An improvement of embossing qualities and roller lifetimes through developments of new materials, surface treatments and finishing processes
- An active supply-chain management through pre-storage and delivery according to the customer's demand
